

## **Lindsay Dimitri**

### Biography

Lindsay Dimitri grew up in Genoa, Nevada and spent her childhood catching lizards and following mule deer trails through the sagebrush along the foothills of the Carson Range. She finished a B.S. and completed a M.S. at the University of Nevada, Reno, and worked at the USDA-ARS: Great Basin Rangelands Research Station in Reno for 16 years as a research technician and rangeland ecologist. Her research on invasive plant species, small mammal ecology and animal mediated seed dispersal processes of important rangeland plants has taken her all over the state of Nevada. Having worked in a variety of the diverse habitats found across the state and collecting data in some of the most remote locations, she has a connection to and appreciation for not only Nevada flora and fauna, but also of the ways in which humans have left their mark on the unique landscapes of her home state.
